

Team Explores How Brain’s Anterior Shift Predicts Memory Clarity

One of the main signs of cognitive aging is the fading ability to retrieve details of one’s experiences. This phenomenon has now been tied to the so-called anterior shift.

Dear Friends,
We are excited to kick off the new fall semester. Our Booziotis Distinguished Lecture series returns in October at the Communities Foundation of Texas featuring Dr. R. Alison Adcock of Duke University. We are also still celebrating the massive success of the CVL's 10th Anniversary celebration, which you can read more about below. Plus, we are excited to announce that we will be hosting our long-running Dallas Aging & Cognition Conference in the heart of the Dallas Arts District for the first time ever next year. I'm personally looking forward to the new semester as we continue ramping up our research activities and center-wide scientific events, working towards our mission of cognitive health for life. As always, I greatly appreciate your continued support of our Center and its research.

Sincerely,
Dr. Michael Rugg
Director, Center for Vital Longevity

EVENTS

Booziotis is back!

Dr. R. Alison Adcock of Duke University will be this year's guest speaker for the Booziotis Distinguished Lecture.
